

VAVELIO LTD — INVESTOR ONE-PAGER

European datacenter engineering. Built to own.

Vavelio is a boutique datacenter engineering firm based in London. We take on a limited number of clients each year to ensure every engagement receives dedicated attention. We do not resell virtual machines, licenses, or bandwidth — we deploy applications into infrastructure the client owns, under their control, managed by our engineers.

OWNERSHIP

Privately held · client-funded · profitable

TRADEMARK

UK00004263810

ENGAGEMENT

Referral-only, limited number of clients per year

WHAT WE DO

Datacenter Engineering

We design, deploy, and run physical and virtual data centers, global networks, and zero-trust security architectures.

European Sovereignty

Infrastructure you own, on European hardware, outside US jurisdiction — aligned with GDPR and the Schrems II reality.

Open Source First

Proxmox over VMware, OpenBao over HashiCorp, Zitadel over Entra ID, Wazuh over Splunk. No vendor lock-in.

Engineer-Led

The engineers who design your infrastructure are the engineers who deploy and run it. No sales-driven layers.

PRODUCT PLATFORM

Storage & Data — VNAS, VBKS, VCRS, VDLS

Networking & Routing — VRTS, VDNS, VPRS, VPXS, VLBS, VKBS

Identity & Security — VIDS, VPMS, VPWS, VVTS

Communication & Productivity — VMLS, VINS, VTKS, VWFS, VMQS

Infrastructure & Monitoring — VMNS, VALS, VWDS

Specialized — Airgap

WHY INVESTORS CAN TRUST US

Profitable Without Investment

NDA by Default

We have never taken external capital. Every euro spent comes from a client who pays us because we deliver infrastructure they depend on.

Every engagement begins with a mutual NDA. Clients are prohibited from publicly disclosing their relationship with Vavelio.

No Vendor Lock-In

Every server we deploy is owned by the client. If the relationship ends, they keep everything.

Financial Transparency

An ongoing plan to publish aggregate financial statistics — revenue, profitability, client count.

INVESTMENT PRINCIPLES

- Clients first — investment cannot alter our commitment to client infrastructure
- Engineering independence — no investor-mandated technology choices
- European jurisdiction — any partner must be European and EU-regulated
- No exit obligation — we will not accept terms requiring a sale or liquidity event

THE OPPORTUNITY

European infrastructure sovereignty is a structural market shift: GDPR enforcement, Schrems II, and the VMware/Broadcom migration wave create durable demand for independent, sovereign datacenter engineering. Vavelio is positioned to serve exactly this market with a profitable, client-funded model.

VENDORS & PROJECTS

Proxmox — open-source virtualization platform

OpenBao — open-source secrets management fork of HashiCorp Vault

Zitadel — open-source identity and access management platform

Wazuh — open-source security monitoring platform

Broadcom — semiconductor and infrastructure software company

VMware — virtualization and cloud infrastructure software

HashiCorp — infrastructure automation and secrets management company

Entra ID — Microsoft cloud identity and access management service

Splunk — data analytics and security information platform
